

## Chapter Seven (i): Host and Domain name

### Summary of Chapter:

- How to change the Host and Domain Name.

### What you need:

- Knowledge of Admin user account and valid password for your Pilot.
- A new Hostname and Domain name.

### Software Revision Required:

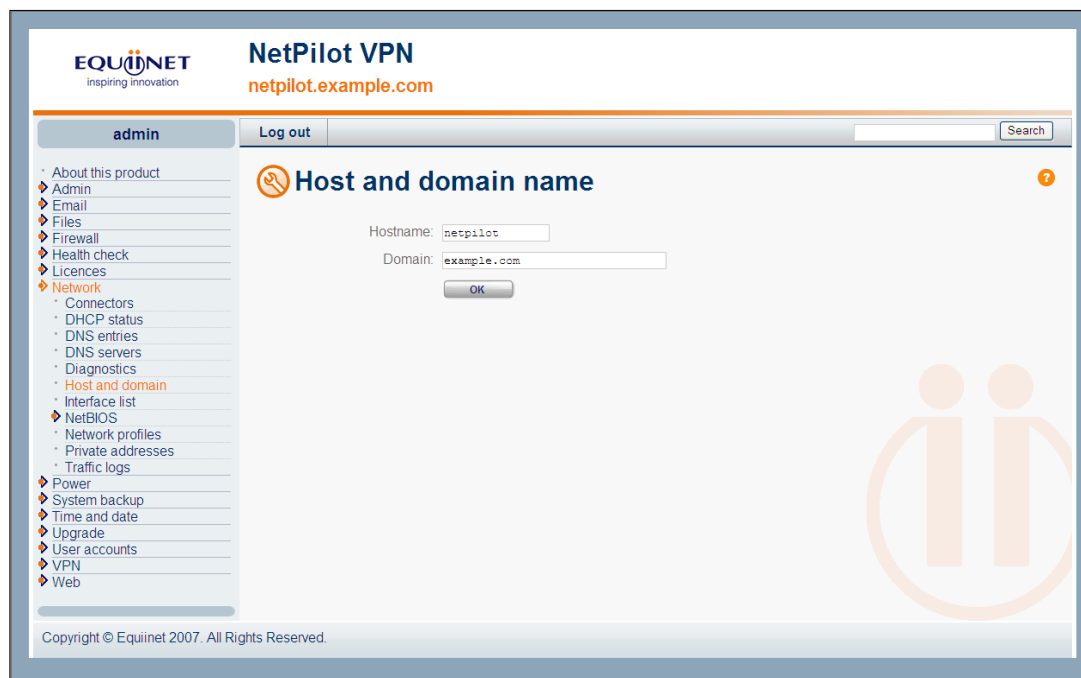

- Applicable to software revision 5.2.0 > Net/CachePilots

(Net/CachePilot will be referred to as 'Pilot'. All image examples are of a NetPilot.)

### Host and Domain:

- Log on to the Pilot as shown in Chapter One (b).

- From the left-hand side of the screen, select 'Network' and then 'Host and domain'. (All links are highlighted below).

- You will be presented with the screen shown above.

- You can enter your domain name and a Hostname for the Pilot in this screen, in the relevant text boxes provided.

- Once you have entered the changed details, selected the 'OK' button and again to confirm.

If you have changed the Hostname above, please remember when you next try to access the Pilot; you will need to enter the new Hostname into the URL. For example:

https://pilot/intro becomes https://newhostname/intro

If you have changed the Domain name, this may affect the email that the Pilot will accept, depending on how you have set-up your Pilot.
